

Belt Pickup Platform

***Improvements for model year 2003 on 914 Belt Pickup***

- Quik-coupler telescoping drive shaft
- Perma-Glide™ end shields
- Three-roller pickup for uniform feeding
- Hydrostatic pickup drive
- High-capacity auger
- Extendable pickup

615 Series Belt Pickup

615 Series belt pickup has up to a 15% increase in feeding capacity over a 914 Series Belt Pickup. The way this was achieved was through the following features:

- New 21-in. narrow pitch auger flighting (versus 26-in. auger pitch previously used) with four in-line rows of auger fingers provides smooth, constant material flow in large or tough windrow conditions
- One-piece floor strippers help hold heavy crop under the auger longer for better contact and consistent material flow to the combine feeder- house
- Adjustable rear strippers help eliminate “bunching” and “crop carryover” the auger at high ground speeds
- Auger flight extensions are added to the cross auger to allow better feeding when attached to STS combines. When operating with the wide-body 9650 Walker Combine, it is recommended that the auger extensions be removed
- A heavy-duty reinforcement is added at the auger rear pivot and endsheet to improve strength and durability
