

Product Introduction

Hardened Low-cut Bedknives

At John Deere, we're committed to providing hardworking, long-lasting parts for your operation. That's why we created our new **Hardened Low-cut Bedknives**. These new bedknives are made of hardened tool steel with a Rockwell C hardness of 60 compared to the Rockwell C hardness of 50 in conventional heat-treated knives. They last two to three times longer than conventional hardened knives, and technicians can expect to spend less time performing maintenance with bedknife-to-reel adjustments, backlapping, grinding, and changing bedknives during the growing season.

The hardened low-cut knives are less aggressive than conventional heat-treated low-cut knives by approximately 2 mm (0.079-in.), reducing the impact to the grass plant, reducing lines and signs of stress, and leaving an optimum after-cut appearance.

Recommended when installing 14-blade reels. Compatible with Quick-Adjust (QA5) cutting units and 180SL and 220SL PrecisionCut™ walk greens mowers.

Available on JDParts.com and through John Deere dealers.

Part numbers:

- TCU36165 – 55.88-cm (22-in.)
- TCU36878 – 45.72-cm (18-in.)
